Comprehensive Pension Functionality,  
Tailored to Suit Your Distinct Needs and Vision

# Neospin™ Pension Administration System

## A Comprehensive Solution Configured to Your Organization's Technical and Functional Requirements

Sagitec presents Neospin™ – a web-based pension administration solution tailored to your program needs and business requirements. Neospin™ offers a rich set of functional designs, tested software components, and a sophisticated technological platform of tools and services that make it easier to configure, deliver, support, and maintain a first-rate pension solution.

Built upon a domain-neutral technology architecture, Neospin™ mitigates the risk of technical obsolescence better than any solution on the market. It also dramatically improves your ability to evolve your business solution quickly, safely, and continuously in response to plan design or policy changes. Most important, Neospin™ provides a path forward for technical and functional evolution. With Sagitec, your agency can avoid 'ripping and replacing' software every time there's a technological advance.

Since 2004, Neospin™ has helped public pension funds like yours enhance service capabilities, lower operating costs, combat obsolescence, and respond to complex, frequently changing business requirements. Our solution is second to none in the public pension industry.

## Sagitec's Development Tools Give You the Power to Develop Without Programming

Sagitec extended Visual Studio.NET by creating powerful but simple development accelerators that unify Framework engines with XML metadata and other services. When taken together, these tools form a Development Suite that helps business analysts, software developers, and technical architects design, build, extend, deploy, and maintain their Neospin™ solution.

Studio tools dramatically improve your ability to respond to change. They implement complex functions in easy-to-use, graphical processes – without requiring expert-level technical skills. Business users can actively participate in the software development process and increase your overall capacity to respond to social, political, economic, and technical change. Currently, we have three Studio tools that stand alone but work together in an integrated fashion.

# Neospin™ Pension Administration System

## The Sagitec Platform: Continuous Evolution for Long-Term Viability

Sagitec builds and supports our tailored business solutions upon a continuously evolving software platform called the Sagitec Platform. As our Platform evolves, so can individual client systems—regardless of when they were implemented.

The Sagitec Platform mitigates the risks associated with technical obsolescence and rapid business change. The Platform underlies every solution Sagitec builds—but is separate from each. This separation allows both to evolve independently, providing you with unprecedented flexibility for adding new features and functions when you need them.

## The Sagitec Platform Allows for Maximum Flexibility in Meeting Your Needs

## Sagitec's Process Design and Development Tools

There are two main tools that help you design and test business rules in your LOB solution.

**Sagitec Software Studio (S3)** – A web-based application development tool that allows technical staff to design and build your pension administration solution in a web-based environment. In addition to fostering the rapid development of your unique features (e.g., user interface designs, prototypes, workflow modeling, etc.), the Sagitec Software Studio allows Sagitec's staff to define the states' business rules using logical rules and decision tables instead of a complex programming language.

**Sagitec Test Studio** – A powerful regression testing tool is used to define and automate test cases. Test scripts are reusable and can be executed offline, which expedites and simplifies the testing process, and the intuitive repository allows staff to review testing results for quality assurance.

# Key Neospin™ Features and Benefits

## Business Process Management

BPMN 2.0 compliant process maps with integrated forms, rules, and activities provide run-time execution; supports Business Activity Monitoring (BAM), SLA timers and escalation, as well as performance analysis and reporting; process execution paths captured and stored for audit and compliance verification.

## Adaptable Framework Architecture

Separates the underlying technical architecture from the business architecture, allowing you to change layers independently from each other and allowing you to minimize downtime when technology changes, when policies change, or when your environment demands growth.

## Scalable, Open Architecture

Employs leading standards and techniques including XML, JSON, Web Services, JQuery, JavaScript to promote interoperability and maintainability of your system.

## Exploits Interface Independent Development

Reduces development and maintenance costs by exploiting the features of client devices including web browsers and mobile platforms using MVVM without having to rewrite business services; responsive design and UI/UX to enhance customer satisfaction with improved web portal usability.

## Core Pension Functionality

Maps to your requirements and business components straight out-of-the-box for rapid configuration.

## Comprehensive Self-Service Portals

Enables secure, easy-to-use, online self-service access to member, employer, and third-parties; provides secure communication, education, information, transaction processing and a tailored experience for each stakeholder through most preeminent web browsers or mobile devices.

## Integrates Enterprise Content Management (ECM) Systems for Managing Varied Forms of Content

Reduces manual paper handling (inbound and outbound) and improves the efficiency of your business processes; integrates

with knowledge management systems for instant access to forms, brochures, publications, laws, policies and other on-demand content.

## Support for Advanced and Automated System Access... Anytime, Anywhere

Provides seamless application integration with nearly any commercial or legacy software or component via web services; leverages existing investments in software packages such as accounting, Customer Relationship Management (CRM), ECM, telephony, mobile, business intelligence, legacy and partner solutions.

## Microsoft .NET Technology

Reduces total cost of ownership by applying common skills across a variety of devices, application types, and programming tasks; integrates with other tools and technologies to build tailor-made solutions faster using Microsoft's .NET technology.

## Robust Approach to Business Rule Management

Separates business rules from application code; model, design, test, and deploy new business rules without programming to quickly accommodate changes in policies and regulations; capture and store rule execution for compliance validation.

## Single Code Base for Long-Term Maintenance

Simplifies development and maintenance and reduces total cost of ownership by using a single, common code base and business rules engine for online forms, batch processes, web services, and self-service portals.

## Business Intelligence (BI) Reporting Features

Supports standard off-peak queries, report customization, and ad hoc reporting – allowing your management team to monitor workloads and key process metrics while complying with federal and state reporting requirements.

## About Sagitec

Sagitec Solutions is a growing global software and IT company that designs and delivers tailor-made pension, provident fund, unemployment insurance and health and life sciences software solutions to clients of all sizes. Understanding that a dynamic world requires dynamic technology, Sagitec offers solutions that are highly configurable and extensible by nature. With deep industry experience in software implementation and systems integration, project management, consulting, hosting and software support, Sagitec is a partner clients can trust to deliver mission-critical IT projects. Sagitec has multiple office locations and is headquartered in Saint Paul, Minnesota. Learn more at [www.sagitec.com](http://www.sagitec.com).
